Learning Outcomes

After completing this experiment, we will be able to:

1. Understand the basics of Git and Git repositories.
2. Create and initialize a Git repository using **git init**
3. Create and manage branches in Git.
4. Switch between different branches using **git switch**
5. Add files to the staging area using **git add**
6. Create and view commits using Git commands.

7. Understand the difference between master/main and feature branches.
8. Manage and track changes in a project using Git.
